# 安装httpd+mysql+php

实验器材： acadia + Ubuntu；

实验环境： OS X 10.10.2 + iTerm；

首先将acadia与电源、网线和PC连接。

用minicom在iTerm中连接acadia，输入以下命令安装Apache、MySQL、PHP以及PHP访问MySQL所需的库。其中，安装MySQL过程中会要求输入root用户的密码。

```
sudo apt-get install apache2
sudo apt-get install mysql-server
sudo apt-get install php5
sudo apt-get install php5-mysql
```

安装过程如下:

```
root@Acadia:~# sudo apt-get install apache2
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following extra packages will be installed:
  apache2-mpm-worker apache2-utils apache2.2-bin apache2.2-common libapr1
  libaprutil1 libaprutil1-dbd-sqlite3 libaprutil1-ldap
Suggested packages:
  apache2-doc apache2-suexec apache2-suexec-custom ufw
Recommended packages:
  ssl-cert
```

```
[ OK ]
Setting up apache2 (2.2.22-1ubuntu1) ...
Processing triggers for libc-bin ...
ldconfig deferred processing now taking place
root@Acadia:~# sudo apt-get install mysql-server
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following extra packages will be installed:
  libdbd-mysql-perl libdbi-perl libmysqlclient18 libnet-daemon-perl
  libplrpc-perl mysql-client-5.5 mysql-client-core-5.5 mysql-common
```

```
150319 22:56:16 InnoDB: Starting shutdown...
150319 22:56:17 InnoDB: Shutdown completed; log sequence number 1595675
mysql start/running, process 6407
Setting up mysql-server (5.5.22-0ubuntu1) ...
Processing triggers for libc-bin ...
ldconfig deferred processing now taking place
root@Acadia:~# sudo apt-get install php5
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following extra packages will be installed:
  apache2-mpm-prefork libapache2-mod-php5 php5-common
```

```
Restarting web server apache2
... waiting apache2: Could not reliably determine the server's fully qualified domain name: /var/www/index.html
[ OK ]
Setting up php5 (5.3.10-1ubuntu3) ...
root@Acadia:~# sudo apt-get install php5-mysql
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following NEW packages will be installed:
```

安装完，我分别对他们进行了测试。

首先，用ifconfig命令获得acadia的IP地址，为192.168.1.104。

```
minicom (minicom) ~ (zsh)
root@Acadia:~# ifconfig
eth0      Link encap:Ethernet  HWaddr 4c:53:09:1e:71:d4
          inet addr:192.168.1.104  Bcast:192.168.1.255  Mask:255.255.255.0
          UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
          RX packets:47  errors:0  dropped:0  overruns:0  frame:0
          TX packets:30  errors:0  dropped:0  overruns:0  carrier:0
          collisions:0 txqueuelen:1000
          RX bytes:7522 (7.5 KB)  TX bytes:4754 (4.7 KB)
```

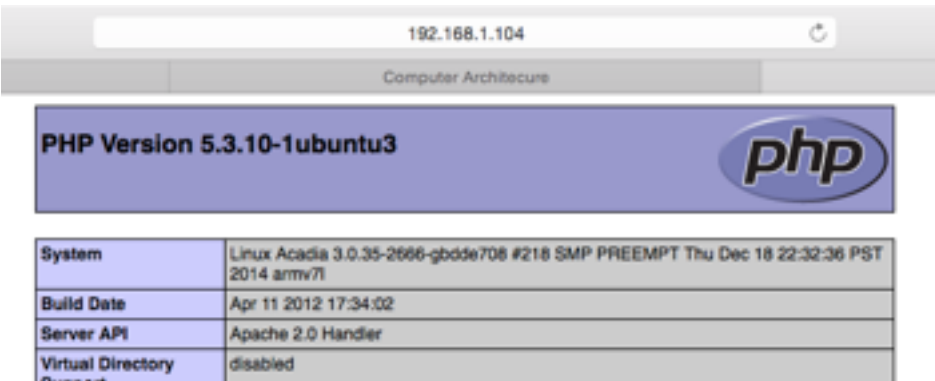

然后在PC浏览器(PC和acadia处于局域网)访问这个ip地址，得到以下结果，说明Apache安装配置正确。

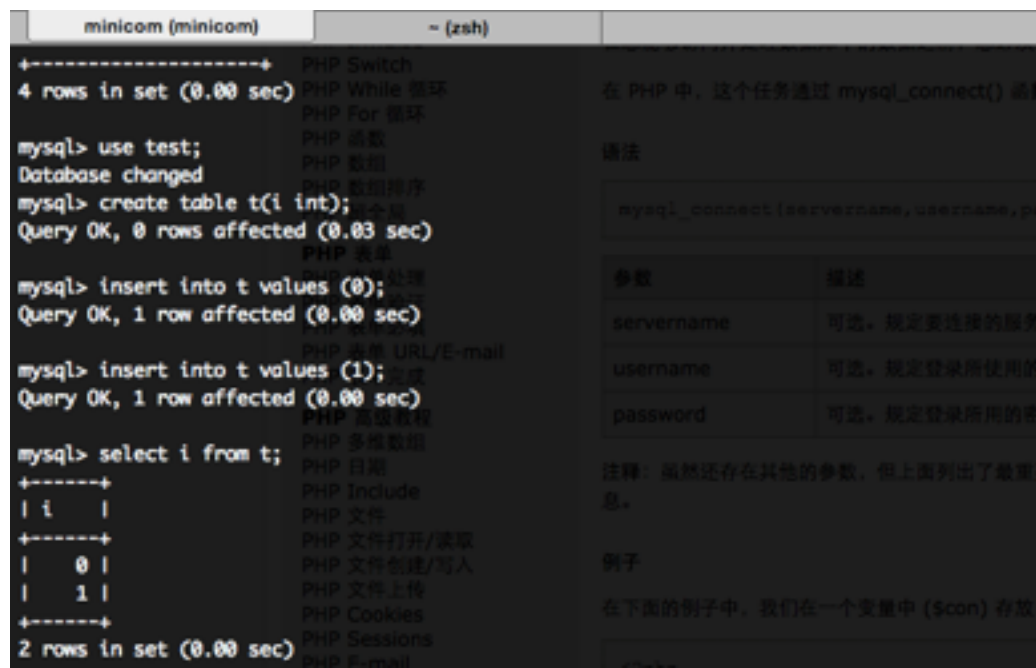

然后，我们进入/var/www，删除index.html文件，创建index.php文件，并输入以下内容：

```
minicom (minicom) ~ (zsh)
<?php echo '<p>Hello World</p>'; ?>
~
~
~
```

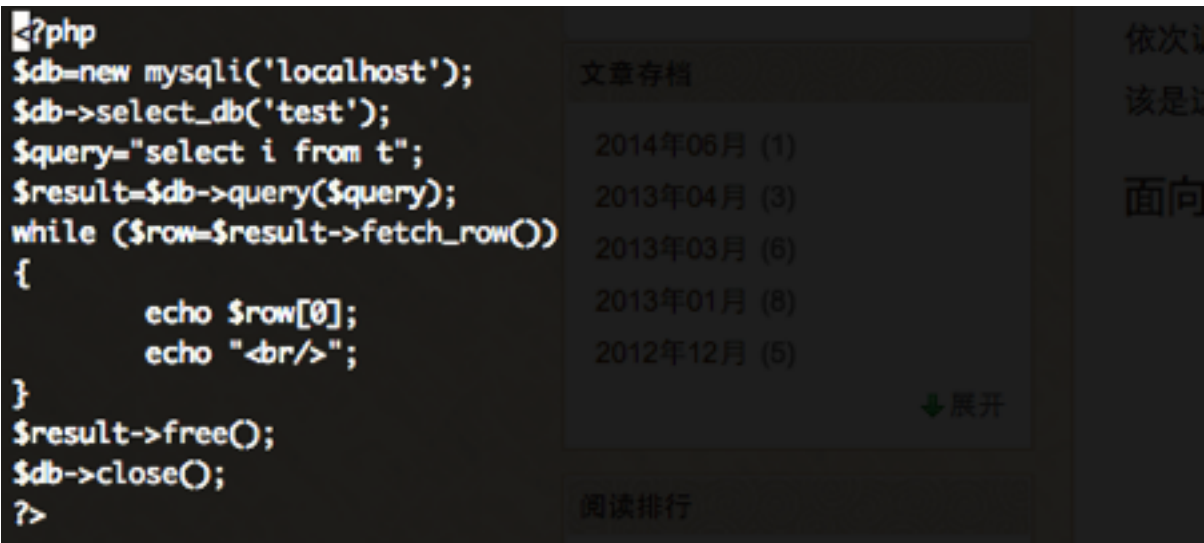

然后再次访问192.168.1.104，得到以下结果，说明PHP配置正确。

之后，我们进入MySQL，在test数据库中创建一个表名为t的表，包含一个为INT类型的字段，再往表中插入0和1两条数据。

之后，将/var/www/index.php的内容改为：

重新进入192.168.1.104，得到以下结果，我们插入的数据显示在了网页上：

至此，Apache、MySQL和PHP全部配置成功。
